### Basic System Selection

We provide a wide selection of chain sizes to cover a wide variety of product sizes and shapes. In order to select the right chain size to use in your application, consider the following selection criteria:

- **Product Dimensions**  
A product can be two or three times wider than the conveyor chain as long as the center of gravity of the product falls within the chain width. Extra supporting guide rails are required and testing is recommended.
- **Product Weight**  
Product weight is important in chain selection as each chain has its maximum traction force. Traction force calculation is required when there are several heavy products to be conveyed, and it will increase further if the products are accumulated on the conveyor.
- **Technical Calculation**  
It is important to calculate total load on conveyor based on product weight, distance between products, accumulation and length of the system. The frequency of start /stop, chain tension and service factor are important. If the calculated capacity is higher than the selected drive and chain series, the conveyor should be shortened or select a system with higher capacity.
- **Small Footprint**  
Straightforward layout and compact design maximizes valuable floor space while minimizing noise, maintenance and footprint.

### Bends

Bends are used to change the direction of chain movement in conveyors. There are 3 types of bends available:

- **Wheel Bends**  
Designed with top and bottom wheels that rotate freely with the chain and are supported by a dual sealed ball bearing, providing the lowest friction, minimum bend force and smallest turning radius compared to other types of bends. Besides standard 30°, 45°, 60°, 90° and 180° configurations, special angles are also available upon request. Select a horizontal wheel bend whenever is possible.
- **Horizontal Bends**  
An alternative to wheel bends, horizontal bends are useful in conditions requiring large space, long products with large turning radius and twin – track bend applications. It has higher friction compared to wheel bends. Larger radius is recommended for lower friction and less stress on slide rail.
- **Vertical Bends**  
A vertical bend provides vertical change of the conveyors moving direction. It can be used either as a convex or concave bend. Vertical bends increase the chain tension and cause higher stress on the slide rail. Avoid using more than four 90° vertical bends in one conveyor.

### Slide Rail

A slide rail provides low friction and wear resistant track for the chain to slide on. It is mounted to a conveyor frame using screws or rivets. Various types of slide rails are available to meet different requirements like normal operation, high speed, high load, conductive and accumulation applications.

### Conveyor Frames

Conveyor frames are made of Stainless Steel provided in cut to length sizes to match the application. The conveyor side frame is provided with mounting locations for guides and support stands.

### Guide Rail Assembly System

Guide rail components are used to guide and contain products throughout the conveyor system and prevent them from falling off the conveyor. We provide a comprehensive range of Stainless Steel guide rails, and brackets either fixed or adjustable to cover many specialized product sizes and shapes.

### Structural System

Our Stainless Steel structural support system consists of Stainless support stands cut to the height of the application. Each support includes a tripod base for fine height adjustments.

### Conveyor Accessories

We offer a wide selection of conveyor accessories from special bolt & nuts, brackets, connecting strips, rivets, rollers, and washers for inter-connection between modules and components.

## HOW TO PURCHASE

### Purchasing a FlexMove Conveyor

Dorner offers three solutions for purchasing a FlexMove Conveyor.

- The first solution is to order all the necessary parts and components to build your FlexMove Conveyor on site. This will require the proper tools for cutting, bending and installing the conveyor. Consult our installation guide for FlexMove Conveyors for more details.
- The second solution is to have a complete conveyor provided through our FlexMove Solutions. With FlexMove Solutions, you can have the conveyor built in our facility, tested, broken down into shippable sections and shipped to the end site for installation.
- The third solution is to work with Dorner to have your FlexMove Conveyor assembled at the final site. The Conveyor will be purchased similar to option 2, but will be shipped as pre-cut and sized components. The Dorner installation team will then assemble and test the equipment at your location. Contact a Dorner representative for a quote on this service.

**65 mm (2.5 in)**

- Maximum load = 30 kg/m (20 lbs/ft)
- Maximum total load = 136 kg (300 lbs) non-accumulated
- Maximum length = 30 m (98 ft)

### Standard Plain Chain FSPC-5

**UOM: 5 Meter / box**

Application: Suitable for horizontal and slope < 5° transport of products with accumulation.

### Universal Chain FSUC-5

**UOM: 5 Meter / box**

Application: Universal Link with M3 Nut, Suitable for attached customer cleat or fixture

### Wedge Top Chain FSWT-5A

**UOM: 5 Meter / box**

Application: Vertical Wedge transportation of products.

### Wedge Top Chain FSWT-5C

**UOM: 5 Meter / box**

Application: Vertical Wedge transportation of products. (Heavy Duty)

### Wedge Top Chain FSWT-5D

**UOM: 5 Meter / box**

Application: Vertical Wedge transportation of products.

Friction Top Chain **FSFT-5**

**UOM: 5 Meter / box**  
 Application: Suitable for transport product in slope > 5° but ≤ 30° without accumulation.

Friction Top Chain **FSFT-5C**

**UOM: 5 Meter / box**  
 Application: Suitable for transport product in slope > 5° but ≤ 35° without accumulation. Subject to product weight and packing

Twist Chain **FSPC-5M**

**UOM: 5 Meter / box**  
 Application: Suitable twist conveyor beam; horizontal and slope < 5° transport of products with accumulation

Conductive Chain **FSPC-5CD**

**UOM: 5 Meter / box**  
 Application: Suitable for transport of static sensitive product.

Flocked Chain **FSFK-5**

**UOM: 5 Meter / box**  
 Application: Suitable to transport lightweight, fragile and scratch sensitive product.

**Cleat Top Chain-A FSCT-5A17-L#**

# = 1, 2, 3, 4, 5.....20

**UOM: 5 Meter / box**

Application: Suitable for vertical transport of product with no accumulation.

**Cleat Top Chain-A FSCT-5A30-L#**

# = 1, 2, 3, 4, 5.....20

**UOM: 5 Meter / box**

Application: Suitable for vertical transport of product with no accumulation.

**Cleat Top Chain-B FSCT-5B**

**UOM: 5 Meter / box**

Application: Suitable Cigarette transport.

**Cleat Top Chain-C FSCT-5C**

**UOM: 5 Meter / box**

Application: Suitable for Cigarette transport.

**Magnet Top Chain FSMT-5**

**UOM: 5 Meter / box**

Application: Suitable for conveying ferromagnetic products in slope.

**Magnet Top Chain FSMT-5-L#**

# = 1, 2, 3, 4, 5.....20

**UOM: 5 Meter / box**

Application: Suitable for conveying ferromagnetic products in slope.

Hardened Steel Top Chain **FSST-5**

**UOM: 5 Meter / box**  
 Application: Suitable to transport metal products in accumulation.

Stainless Steel Top Chain **FSST-5S**

**UOM: 5 Meter / box**  
 Application: Suitable to transport metal products in accumulation.

Roller Top Chain **FSRT-5**

**UOM: 5 Meter / box**  
 Application: Suitable for accumulation of product with low friction and pressure.

Roller Cleat Chain **FSRC-5A-L#**

**UOM: 5 Meter / box**  
 Application: Suitable for vertical transportation, of product in slope with no accumulation.

### Example for FCCT-5A17-L#

# = 1 cleated top chain with alternate of # link of plain chain

The above chain is FCCT-5A17-L1, 1 link cleated top chain with alternate of 1 link of plain chain.

**Note:** # = 1, 2, 3, 4, 5.....20

### Standard Plain Chain FCPC-5

**UOM:** 5 Meter / box

Application: Suitable for horizontal and slope < 5° transport of products with accumulation.

### Conductive Chain FCPC-5CD

**UOM:** 5 Meter / box

Application: Suitable for transport of static sensitive product.

### Cleat Top Chain FCCT-5A30-L#

# = 1, 2, 3, 4, 5.....20

**UOM:** 5 Meter / box

Application: Suitable for vertical transport of product with no accumulation.

### Cleat Top Chain FCCT-5A17-L#

# = 1, 2, 3, 4, 5.....20

**UOM:** 5 Meter / box

Application: Suitable for vertical transport of product with no accumulation.

### Roller Top Chain FCRT-5

**UOM:** 5 Meter / box

Application: Suitable for accumulation of product with low friction and pressure.

Roller Cleat Chain **FCRC-5A-L#**

**UOM: 5 Meter / box**  
 Application: Suitable for vertical transportation of product in slope with no accumulation.

Roller Cleat Chain **FCRC-5B-L#**

**UOM: 5 Meter / box**  
 Application: Suitable for vertical transportation of product in slope with no accumulation.

Friction Top Chain **FCFT-5**

**UOM: 5 Meter / box**  
 Application: Suitable for transport product in slope > 5° but ≤ 30° without accumulation.

Friction Top Chain **FCFT-5A**

**UOM: 5 Meter / box**  
 Application: Suitable for transport product in slope > 5° but ≤ 30° without accumulation.

Friction Top Chain **FCFT-5B**

**UOM: 5 Meter / box**  
 Application: Suitable for transport product in slope > 5° but ≤ 40° without accumulation.

Friction Top Chain **FCFT-5C**

**UOM: 5 Meter / box**  
 Application: Suitable for transport product in slope > 5° but ≤ 35° without accumulation.

Hardened Steel Top Chain FCST-5

**UOM: 5 Meter / box**  
 Application: Suitable to transport metal products in accumulation.

Stainless Steel Top Chain FCST-5S

**UOM: 5 Meter / box**  
 Application: Suitable to transport metal products in accumulation.

Flocked Chain FCFK-5

**UOM: 5 Meter / box**  
 Application: Suitable to transport lightweight, fragile and scratch sensitive product.

Safety Chain FCPC-5V

**UOM: 5 Meter / box**  
 Application: (Safety Chain) Suitable for horizontal and slope < 5° transport of products with accumulation.

Twist Chain FCPC-5M

**UOM: 5 Meter / box**  
 Application: Suitable twist conveyor beam; horizontal and slope < 5° transport of products with accumulation

**Regulatory Approvals:**

**Conveyors:**

All Dorner FlexMove Series standard conveyors (not including gearmotors and controllers) are CE approved. CE approval follows the provisions of the following directives; Machine Directive 2006/42/EC, EU Low Voltage Directive 2006/95/EC, and EMC Directive 2004/108/EC. All conveyors are marked with the CE symbol on the Dorner serial number tag located on the conveyor frame. Contact the factory for the CE Declaration of Conformity.

All Dorner FlexMove Series standard conveyors (not including gearmotors and controllers) are designed and manufactured in accordance with the restrictions defined in the “Restriction of Hazardous Substances” directive, citation 2011/65/EU, commonly known as RoHS. All conveyors are marked with the RoHS symbols on the Dorner serial number tag located on the conveyor frame.

**Gearmotors and Controllers:**

All Dorner FlexMove Series gearmotors and controllers carry one or more of the following approvals. Products are not covered by each approval. Please see the appropriate part number on the Gearmotor and controller charts located in this manual. In addition, regulatory symbols are located on the product information tags located on the product.

	<p>CE Marking on a product is a manufacturer's declaration that the product complies with the essential requirements of the relevant European health, safety and environmental protection legislation, in practice by the Product Directives. CE Marking on a product ensures the free movement of the product within the European Union (EU).</p>
	<p>This directive restricts (with exceptions) the use of six hazardous materials in the manufacture of various types of electronic and electrical equipment. It is closely linked with the Waste Electrical and Electronic Equipment Directive (WEEE) 2002/96/EC which sets collection, recycling and recovery targets for electrical goods and is part of a legislative initiative to solve the problem of huge amounts of toxic e-waste.</p>
	<p>The UL Recognized Component mark is for products intended to be installed in another device, system or end product. This Recognized Component Mark is for the United States only. When a complete product or system containing UL Recognized Components is evaluated, the end-product evaluation process can be streamlined.</p>
	<p>The UL Recognized Component mark is for products intended to be installed in another device, system or end product. This Recognized Component Mark is for the United States and Canada. When a complete product or system containing UL Recognized Components is evaluated, the end-product evaluation process can be streamlined.</p>
	<p>CSA International (Canadian Standards Association), is a provider of product testing and certification services for electrical, mechanical, plumbing, gas and a variety of other products. Recognized in the U.S., Canada and around the world, CSA certification marks indicate that a product, process or service has been tested to a Canadian or U.S. standard and it meets the requirements of an applicable CSA standard or another recognized document used as a basis for certification.</p>
	<p>The UL Listing Mark means UL found that representative product samples met UL's safety requirements. These requirements are primarily based on UL's own published standards for safety. The C-UL-US Mark indicates compliance with both Canadian and U.S. requirements. The products with this type of Mark have been evaluated to Canadian safety requirements and U.S. safety requirements.</p>

## Clean Room Certifications:

FlexMove Conveyors are often used in clean room applications where the generation of particulates from the conveyor are a concern. In these applications the correct installation and application of the conveyor is critical to the proper running of the conveyor and minimizing the dust generated by the conveyor belt or modular belt. The end user must ensure that the conveyor belts are properly tracked and product accumulation is minimized to providing minimal dust generation.

All of the FlexMove products are designed and constructed to be used in clean room environments. The following FlexMove Series products have gone through third party testing and certification and are certified for use in ISO Standard 14644-1 Class 5 and Federal Standard 209 Class 100 Clean Room applications.

### Conveyor Load Capacity

There are several factors that affect the overall conveyor load of the FlexMove conveyor. These include:

- Conveyor size and configuration
- Conveyor speed
- Application temperature
- Product accumulation
- Number of starts and stops per hour
- Maximum Drive Unit Output

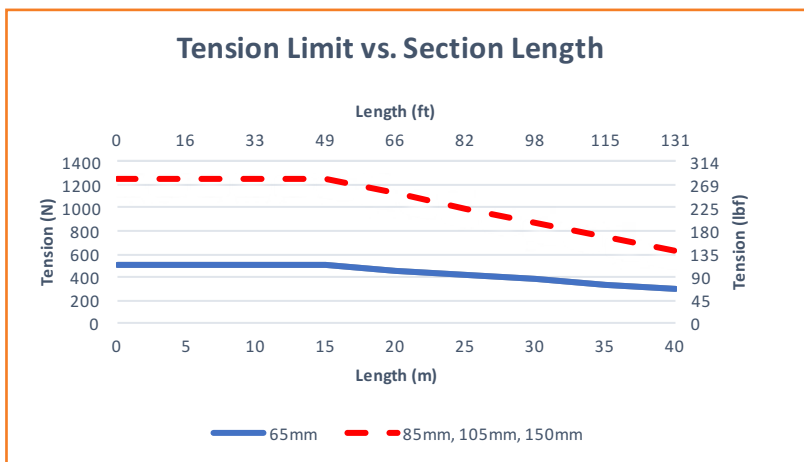

Located online at [www.dornerconveyors.com](http://www.dornerconveyors.com) is the Dorner conveyor configuration tool, DTools. This tool allows you to configure your conveyor layout and determine the maximum load capacity for the conveyor. It is suggested that this program be used to calculate the conveyor load as the calculation is quite complicated. This configuration program however does not take into account temperature, dirty conditions, and conveyor starts and stops. If these conditions are part of your application, please use the load reducing factors as shown below.

**Maximum Load = (Load from DTools) (Temperature Factor) (Start/Stop Factor)**

See following pages for factors.

### Nominal Maximum Load

A Nominal Maximum Load may be calculated without the use of DTools to determine if the conveyor can generally carry the application load. The following process can be used to calculate Nominal Maximum Load. It **does not** take into account the conveyor configuration. Please confirm your maximum load per application with the Dorner DTools program at [www.dornerconveyors.com](http://www.dornerconveyors.com).

To calculate the Nominal Maximum Load:

*Note: This does not include conveyor configuration. Please confirm load with Dorner online DTools configurator.*

1. Determine your Basic Tension Limit from the above two graphs. The Basic Tension Limit is the lesser number of the two. Compare your tension limit to drive unit output. Your tension limit is the smaller.
2. Tension Limit = (Basic Tension Limit) (Temperature Factor) (Start/Stop Factor) (Accumulation Factor) (0.7)  
*See following pages for factors.*
3. Nominal Maximum Load (kg) = (Tension Limit / Chain Coefficient of Friction) - (Conveyor length) (2) (Chain weight)

**Nominal Maximum Load (lbs) = (Nominal Maximum Load (kg)) (2.2)**

See following pages for Chain Coefficient of Friction. Nominal Maximum load may also be limited by available gearmotors.

Conformation of gearmotor torque is required. See pages 66-67 for gearmotors available. Nominal Maximum load cannot exceed overall conveyor load limit of 300 lbs (136kg) for 65 mm wide and 600 lbs (273kg) for 105 mm and 150 mm wide.

**Nominal Maximum Load** *(continued)*

**Example:**

105 mm FlexMove by 20 meters total length running at 15 Meters/min. Accumulated load with dry metal parts running in a 40°C environment. Continuous running.

- Basic Tension Limit – Tension vs. Speed = 1050N
- Basic Tension Limit – Tension vs. Length = 1100N
- Therefore Basic Tension Limit = 1050N
- Tension Limit = (Basic Tension Limit) (Temperature Factor) (Start/Stop Factor) (Accumulation Factor) (0.7)
- Tension Limit = (1050) (0.9) (1.0) (0.5) (0.7) = 330N
- Nominal Maximum Load (kg) = (Tension Limit / Chain Coefficient of Friction) - (Conveyor length) (2) (Chain weight)
- Nominal Maximum Load (kg) = (330 / 0.3) - (20) (2) (16.4) = 1100 - 984 = 116 kg
- Nominal Maximum Load (lbs) = 116\*2.2 = 256 lbs

Temperature Factor		
Ambient temperature can negatively affect the tension capacity of the conveyor chain.		
Temperature (°F)	Temperature (°C)	Temperature Factor
-4	-20	1.0
32	0	1.0
68	20	1.0
104	40	0.9
140	60	0.8

Start / Stop Factor	
Frequent Start / Stops of the conveyor can negatively affect the tension capacity of the conveyor chain. All start / stop applications must use a soft start mechanism such as a Frequency Inverter with a 1 second acceleration cycle.	
Application Condition	Start / Stop Factor
Continuous Run or 1 start/stop per hour	1.00
Maximum 10 starts/stop per hour	0.83
Maximum 30 starts/stop per hour	0.70
Greater than 30 starts/stop per hour	0.62

Accumulation Factor		
Product accumulation greatly reduces the conveyor load capacity. Product accumulation may only be done with the plain chain. Based on the product being accumulated apply the below Accumulation Factor in determining your Nominal Maximum Load. All factors below are assuming dry conditions.		
Product Being Accumulated	Typical Coefficient of Friction	Accumulation Factor
Steel	0.25	0.50
Glass	0.20	0.60
Aluminum	0.25	0.50
Plastic	0.25	0.50
Wood	0.30	0.40
Paper and Cardboard	0.30	0.40

Chain Coefficient of Friction	
The following table provides the coefficient of friction between the standard UHMW wearstrips and the Acetal chain. Coefficient of friction as shown may be reduced by addition of a lubricant.	
Application Condition	Coefficient of Friction
Dry	0.30
Water Lubrication	0.27
Coolant Lubrication	0.20
Oil Lubrication	0.20

**Drive Unit Output Capacity, P(W) requirement depend on:**

- Traction force F (N)    • Chain speed V (m/min)

To calculate power, the equation is  $P = 1/60 (F \times V)$

There are several drive unit designs, the maximum permissible traction force on each type of drive unit as below:

Drive unit type	Maximum traction force in Newton (N)				
	SS	SM	SC	SU	SV
End	500	1250	1250	1250	1250

### Conveyor Noise Level

The actual noise level generated by the conveyor depends on several factors; the installation configuration, the product running on the conveyor, the surrounding equipment, the conveyor options and chain speed. The noise level generated by the conveyor is typically less than the general noise level of factory equipment.

Generally, a higher speed chain will result in a higher noise level. In addition, 65 mm conveyors will run slightly quieter, and power transfer tails will add a few decibel points as well. The following charts provide basic decibel ratings for typical conveyor arrangements, such as wheeled and plain bend corners, and power transfers.

Decibel ratings are taken approximately 3 feet away from the conveyor modules.

## Bend Factors

Bend factors must be considered and calculated at every plain chain. It depends on the angle of the bend  $\alpha$  in radians and friction coefficient  $\mu$  between chain and slide rails. In application when conveyor is dry and clean, the friction coefficient  $\mu$  is close to 0.1.

The bend factor is important to calculate since the frictional force of a plain bend depends not only on the weight of chain and product but also the actual the tension throughout the bend. The result an additional pressure force of the chain towards the conveyor beam directed toward the center of the bend. Since the chain tension varies throughout the conveyor, calculation of this additional pressure force is complicated. The highest values are present at the pulling side of the drive unit and virtually zero at the chain inlet. Using bend factor is the easiest way of including added friction in the plain bend for both horizontal and vertical into the calculation. Always use wheel bend unless for exceptional cases. If using plain bend is a must, the combined plain bends angle should not more than 180°, unless it is for a very short and light application.

Bend type, horizontal or vertical plain bend	Bend factor $\alpha$
30°1	.2
45°	1.3
60°1	.4
90°1	.6

8° inclined is the maximum a product could convey for plain chain whereas friction top chain could take up to 30°

## Material

Material	FlexMove Parts
POM (PolyOxyMethylene)	Conveyor Chain, rollers
POM Conductive (PolyOxyMethylene)	Conductive chain
Aluminum, extruded & anodized	Angle bracket, beam support bracket, conveyor beam, support beam, guide rail, distance tube, fixed and adjustable side guide bracket, spacer
Steel, electro-zinc plated	Bolts and nuts, connecting strips, foot connecting strip
Steel, powder coated	Foot, connecting plate
PA, Polyamide	Chain pivot, side guide bracket, side guide support, drive and idler steering guide, end caps, wheel guide
Polyamide PA + Glass fiber	Drive sprocket, idler wheel
PVC, Polyvinyl Chloride	T-slot cover
HDPE, High Density Polyethylene	Slide rail, guide rail
UHMW-PE, Ultra High Molecular Weight Polyethylene	Slide Rail, drive and idler steering guides
PVDF, Polyvinylidene fluoride	Slide Rail
TPE, Thermoplastic Elastomer	Chain insert for friction top and wedge top

## Resistance to Chemical

FlexMove® components can withstand continuous contact with most chemicals. However, it is recommended to avoid:

- Acids with pH less than 4
- Bases with pH higher than 9

The following table specifies the resistance of several material used in the conveyor on selected chemicals

### Legend

1 = Very good

2 = Good

3 = Moderate resistance

4 = Not recommended

5 = No data available

Note: the table above is valid for temperature range up to 60°C and it is to be considered as guideline only. Furthermore, precautions should be taken when using cleaning agents. If you are in doubt on the material to withstand your special environment, you should go for chemical testing or contact our local distributor.

### Static Electricity

The standard plastic materials used for conveyors have low electrical conductivity so static electricity can build up in the conveyor. When a conveyor is running under normal environment (20°C and humidity 60%) without load, the static electricity build up should be around the following figures:

Above the drive unit	1800-2500V
Idler end	400-500V
Above the wheel bend	400-500V
Above the straight section	250-350V

With the introduction of anti-static material for slide rail and chain, it shall meet the requirement for electronic industry.

## FlexMove<sup>®</sup> Stainless Steel Conveyors are best for:

- Part Handling
- Tight Spaces
- Buffering
- Elevation Changes
- Accumulation
- Long Lengths
- Complex Configurations
- Caustic & Corrosive Environments
- Curves, Jogs, Inclines, Declines

### Sizes & Measurements

- Widths: 65 mm, 85 mm, 105 mm, 180 mm and 260 mm
- Lengths: up to 30 m (98 ft)

### Loads & Speeds

- Loads up to 65 kg/m (44 lbs/ft)
- Speeds: up to 58 mpm (190 fpm)

### Plastic Chain Types

- Standard: Low Friction & Friction Top Inserts
- Specialty
  - Conductive
  - Cleated
  - Hardened Steel Top
  - Roller Top
  - Magnet Top
  - And Many More

Flat

Cleated

Friction Top

Roller Top

### Modules

Drive Tail

Idler Tail

Curves from 15° to 180°

Inclines/Declines from 5° to 90°

### Support Stands

- Tripod Supports
- Horizontal & Adjustable Angle Supports also available

### Guiding

- Fully Adjustable
- Adjustable Width/Height
- Twin Rail
- Overhead Guide
